

Anscombe's quartet: same $\bar{x}$, $\bar{y}$, sds, fitted line and R^2

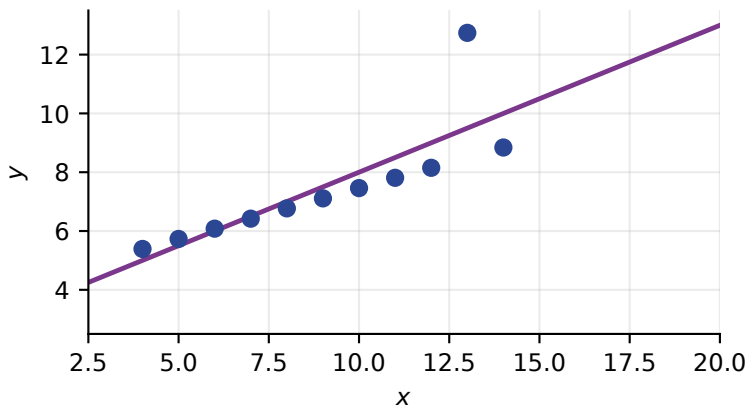

I: $R^2 = 0.6665$ --- a straight line, as advertised

II: $R^2 = 0.6662$ --- an exact parabola

III: $R^2 = 0.6663$ --- a straight line and one outlier

IV: $R^2 = 0.6667$ --- one point sets the slope
