

A scale on all data
(accuracy, $n_{train} = 20$)
mean gap +0.0034, $t = +6.0$

B impute on all data
(accuracy, 30% missing)
mean gap +0.0003, $t = +0.8$

C drop hard rows on all data
(R^2 , worst 10%)
mean gap +0.1702, $t = +29.9$
